## **Edimax Introduces New Gemini Wi-Fi Roaming Range Extenders for Smarter, Stronger and Faster Home Wi-Fi Connectivity**

**Taipei, Taiwan. —August 24, 2016** — Edimax Technology, a leading networking solutions provider, today announced the release of the RE11 Gemini AC1200 Range Extender Kit for a fast upgrade to the latest Wi-Fi roaming technology. The kit features two dual-band RE11S 802.11ac Wi-Fi extenders which extend your wireless network using mesh technology for seamless roaming and Wi-Fi that's always connected to the strongest Wi-Fi signal.

Traditional Wi-Fi routers usually can't cover an entire home, with weak signals and dead-zones appearing in various places that the signal doesn't reach. And Wi-Fi extenders and access points offer only a less-than-ideal solution, providing an additional separate network with another SSID – meaning Wi-Fi devices will often stay connected to the router's weak signal as you move around, instead of your extender or access point.

### **Smart Roaming for Seamless Wi-Fi Connectivity**

Designed to bring fast and seamless connectivity to your home Wi-Fi experience, the Gemini's Wi-Fi roaming feature means that your Wi-Fi devices are always connected to the best available signal. Each RE11S forms a mesh network on the same SSID so that Wi-Fi devices don't need to switch SSIDs as you move around your home, and you can automatically be connected to the best available Wi-Fi signal.

### **Stronger Signal with Reliable Self-healing Technology**

To ensure a reliable Wi-Fi network, Edimax's RE11 Kit is designed with self-healing technology that can avoid signal drops and increase the reliability of Wi-Fi networks. The Wi-Fi network runs regular checkups and essentially heals itself in the event of a problem with no manual or resets required – a reliable and ideal solution for modern connected homes.

## **Faster Speed 802.11ac with Ease**

The Gemini RE11 Kit features supercharged 802.11ac connectivity for high speed Wi-Fi that's perfect to live-stream your life. Wi-Fi users can just plug in the Gemini RE11 kit to instantly upgrade existing 11n to 11ac speeds with dual-band performance, for faster speeds and interference-free 5GHz band performance on Wi-Fi devices without any need to replace or configure existing routers.

“Designed with user-friendliness in mind, Edimax’s Wi-Fi-roaming range-extenders package comprehensive performance elements and customer values into a tailor-made product,” said Rich Hung, President of Edimax Technology. “The Gemini RE11 aims to provide home users with an exceptional Wi-Fi experience which combines elegant design, powerful performance and easy setup.”

The Gemini RE11 is also a 3-in-1 product that can be used as a Wi-Fi extender, Wi-Fi access point or Wi-Fi Bridge with plug-and-play 3-step setup, and it works with any Wi-Fi router. Additionally, its external antenna provides better flexibility for future expansion. The Gemini RE11 kit is available now.
